

When I started working on Wall Street, the Internet was something on a computer at the end of the trading desk. Amazon, eBay, and Google did not exist—but within five years, these companies had changed the world. As a greenhorn trader, I was too young and inexperienced to recognize that the Internet was a once-in-a-generation investment opportunity. I was convinced that I would not see another exponential investment opportunity for the rest of my career—until I discovered blockchain technology. Blockchain technology is one of the most important innovations in the history of finance. It is changing the way we transact, distribute capital, and organize our companies. If you're like me and missed investing in the Internet, read this book so you can take advantage of the biggest investment opportunity since the Internet.
