

- Success in military training
- Diagnosis of appendicitis
- Business failure
- Suicide attempts
- University admissions
- Marital satisfaction
- Wine quality

The study's results are stunning: Models beat experts 46 percent of the time; models equal or beat experts 94 percent of the time; and experts beat models a mere 6 percent of the time (see [Figure 2.2](#)). The empirical evidence that systematic decision processes meet or exceed discretionary decision-making would seem to be overwhelming. The executive summary of the study states it succinctly: *Superiority for mechanical-prediction techniques was consistent, regardless of the judgment task, type of judges, judges' amounts of experience, or the types of data being combined.* — Grove et al.^{[6](#)}
