

millionaire with a number of profitable and successful businesses, Bill is also a well-known philanthropist who gives significant amounts of money to charity.

Andrew had \$40,000 of debt that he owed to one credit card company. They had sold the debt for pennies on the dollar to a collection agency, which runs a very profitable business, buying delinquent loans and forcing people into settlements that they can't afford. Using *Debt Cures* methods, Andrew was able to successfully settle his \$40,000 debt for just \$14,000. He got rid of 65% of his debt. That made a tremendous difference in cleaning up his credit report and increasing his credit score.

That is what you can do. Clean up your debt, increase your credit score. Out with the old, in with the new. Bye-bye bad debt, hello wealth. One of the best investments you ever made is this *Debt Cures* book. I cannot wait to hear your success story.

Ready, Set, Go!

When we were in grammar school, our parents and our teachers taught us to be honest and fair, and that cheaters never prosper, but sadly, as we became adults, we saw that sometimes those who don't "play nice" still end up with all the marbles. Instead of saying, "I'll meet you in the playground after school at 3:00" and duking it out with our fists, we have more mature tactics, but we definitely can stand up to the cheaters and the bullies. We don't have to be pushed around.

I know that there are a lot of debt books out there in the libraries and on the bookstore shelves. They generally all say the same thing: cut up your credit cards; keep one for emergency use only and keep it in the freezer; save up for a major purchase and buy it with cash. There is nothing wrong with this advice, but they are operating under the premise that you are in debt over your head because of your spending habits. We have been led down the path to believe that it is the person's irresponsible behavior creating the situation of the ballooning balances. I'm here to tell you that the real problem lies in the habits of the lending industry and calling their behavior irresponsible would be a gross understatement.
