

However, this will require a fair bit of coding knowledge. You can use your data on top of the existing data in the LLM and build your LLM.

You can use smaller or lesser-known models instead of ChatGPT since they do not cost much. Also, if you want the model to generate answers based on your data, using a model that has not been exposed to much other data makes sense.

If you need good language finesse, better accuracy, or output, nothing can beat ChatGPT and Gemini directly or via the API interface. We will discuss how to use APIs in a future , but for now, understand that every LLM has its own USP. You should figure out the pros and cons of each LLM.

You must familiarise yourself with various models so you know when to use which ones.

Which Is Best LLM?

It Depends on the Requirements
