

EXERCISE

Task: Hands-on Exploration of LLMs

Your goal is to **try out different LLMs** and analyze their strengths.

Step 1: Select an LLM to Explore

Choose any **one** of the following LLMs:

1. **Claude (Anthropic)** – for creative and structured writing
2. **Google Gemini** – for research and multimedia integration
3. **Microsoft Copilot** – for real-time search and factual accuracy
4. **Mistral / Llama** – for fine-tuned AI models (meta.ai)

Step 2: Perform a Test

1. **Access the model** by visiting its official website.
2. **Use the following prompt** to test its text generation ability:
“Write a 100-word social media post promoting an AI-powered personal finance app that helps users save money and manage expenses efficiently.”
3. **Analyze the response:**
 - Is the writing creative or formal?
 - Does it include extra details like hashtags or formatting?
 - How does it compare to what you expected?

Reflection:

How well did this LLM perform in your test? Would you choose it over ChatGPT for similar tasks?
