

To sum it all up, ChatGPT is an AI language model that leverages machine-learning techniques to understand and generate human-like text based on the input it receives. Through its application of NLP and transformer models, it is designed to assist users with various tasks and engage in meaningful interactions.

6.2 Using ChatGPT

To begin using ChatGPT, go to its website and register for a free account. To sign up requires the following information:

Before you use ChatGPT, you need to confirm your email address. You need only to wait for an email sent by ChatGPT and then click the appropriate link in the email.

6.3 Use Cases of ChatGPT

Some of the common ways to use ChatGPT are as follows:-

6.3.1 Customer Support Chatbots

Many firms are developing and operating customer support chatbots with ChatGPT to handle customer queries efficiently. ChatGPT chatbots improve service with real-time, precise, and tailored responses.

Enterprises in different sectors adopt ChatGPT's ability to respond to many customer queries. Such chatbots considerably reduce the load of the human workforce and free them to deal with complex issues that need human intervention.

Previous chapters have already shown how ChatGPT can comprehend PDFs and websites. So, companies can upload product information to ChatGPT-based chatbots in these formats. This will enable the chatbots to answer frequently asked questions.

For instance, a retail company can upload its catalogue, return policies, product-related documents, and database on shipping information to ChatGPT. Then, customer inquiries relating to these documents can be answered through the ChatGPT-based chatbot.
