

6.3.4 Personal Assistants and Virtual Agents

ChatGPT can also be integrated into personal assistant applications to provide personalised assistance to users. This would make a personal assistant more intuitive and user-friendly, increasing its functionality.

It also enables virtual agents to provide personalised assistance. This makes the personal assistants more intuitive and user-friendly. It also allows the personal assistants to respond conversationally, improving efficiency and the user experience. It can help users manage their schedules, set reminders, answer questions, and perform tasks through natural language interactions.
