

6.3.5 Education and Training

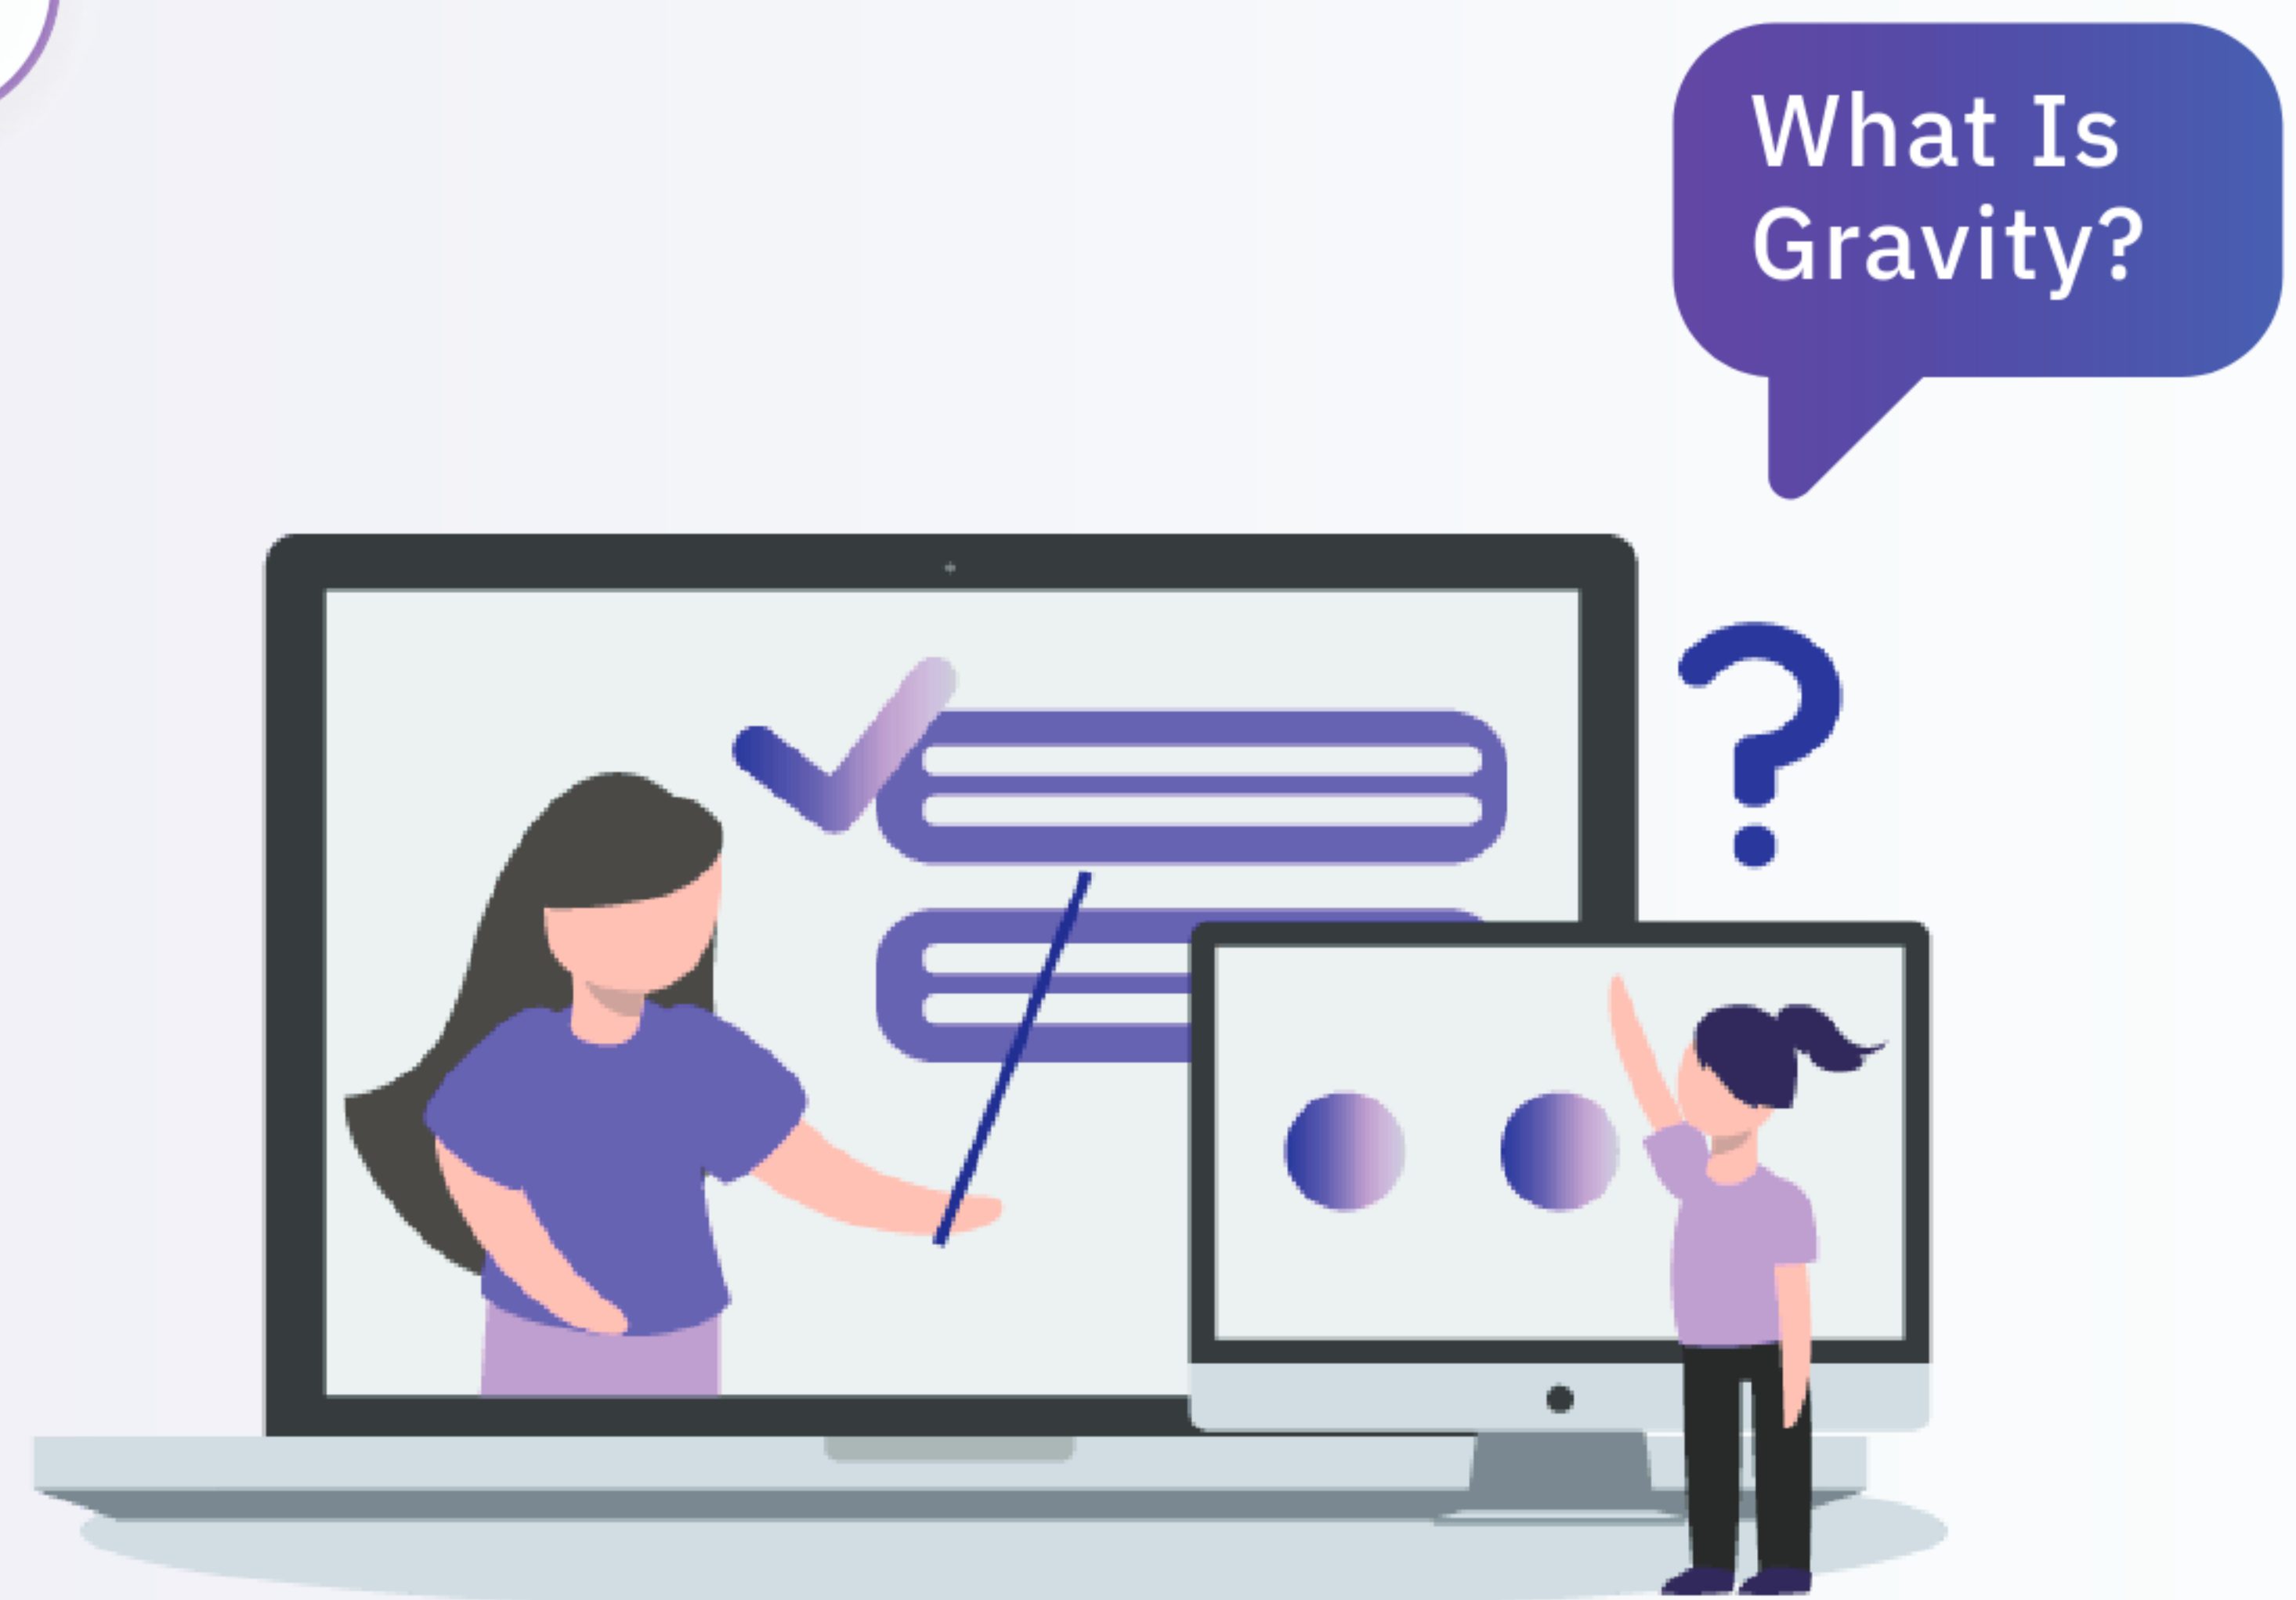

ChatGPT can be used in an academic setting for personalised tutoring, answering students' questions, and helping students with their homework.

In a remote learning environment, ChatGPT can work as a virtual tutor that interacts with each student and caters to the needs and pace of each student.

It can also explain complicated things in simple words and provide further reference material if needed. Digitised homework assignments can be submitted to a ChatGPT-based virtual tutor for grading and feedback.
