

EXERCISE

Task: Explore ChatGPT's Capabilities

Step 1: Choose a Use Case

Select one of the following ChatGPT applications to explore:

1. **Customer Support Chatbots** – Handling real-time customer queries
2. **Content Generation** – Writing blogs, articles, or marketing copies
3. **Personal Assistants** – Helping with schedules, reminders, and tasks
4. **Research and Information Retrieval** – Summarizing articles or answering questions

Step 2: Test ChatGPT

1. **Visit ChatGPT's website and log in.**
2. **Use the following prompt based on your selected use case:**
“You are an AI assistant specializing in [selected use case].
Generate a response to [specific scenario].”
(For example, if you chose Customer Support Chatbots, try:
“Answer a customer inquiry about a delayed product delivery in a polite and helpful way.”)
3. **Analyze the response:**
 - Is it accurate and helpful?
 - Does it understand context well?
 - How does it compare to human-written responses?

Reflection:

Would you rely on ChatGPT for this task? What are its strengths and weaknesses?
