Prompt and response

Few-shot Prompting

Can you suggest a large-scale pop-up event similar to Amazon's *Marvelous Mile*? My TV show is set in Boston in the 1930s and follows the transition of theatre artists to big-screen actors.

Response

That sounds like an incredible concept! Given your TV show's 1930s Boston setting and its focus on the transition of theatre artists to film, a large-scale pop-up event could immerse audiences in the golden age of entertainment while drawing inspiration from Amazon's *Marvelous Mile*.

Event Concept: "Boston's Silver Screen Soirée"

A 1930s Hollywood takeover of Boston, celebrating the rise of film and the transformation of theatre actors into movie stars.

Event Highlights:

1. Historic Theatre Takeover:

- Convert a historic Boston theatre (e.g., the Orpheum or Paramount) into a 1930s movie premiere venue.
- Feature actors dressed as famous theatre performers of the time, reenacting auditions,

Few-shot learning enhances model performance with minimal examples

7.3 Chain of Thought (CoT) Prompting

7.3.1 What is a Chain of Thought Prompting?

Chain of Thought (CoT) Prompting encourages the model to “think aloud” by generating intermediate steps or reasoning that leads to the final answer. It prompts the model to articulate its thought process rather than just providing a direct response.

CoT prompting is similar to showing your workings and calculations in a written math test. Instead of simply providing the solution, you narrate each step of your thought process, explaining how you arrived at each decision. In such tests, the teachers can correct your mistakes accurately by telling you where you went wrong.
