

7.6 Tree of Thoughts (ToT)

7.6.1 What is a Tree of Thoughts (ToT)?

Tree of Thoughts (ToT) is a technique where the model builds a tree-like structure of thoughts to explore different pathways and outcomes. It prompts the model to branch out from the initial prompt, exploring various possibilities and ramifications.

Think of ToT as mapping out different plotlines for a story. Each branch represents a different decision or event, leading to multiple potential story arcs and outcomes.

7.6.2 When to use Tree of Thoughts (ToT)?

ToT is beneficial when you want the model to explore potential scenarios or outcomes related to a given prompt. It is effective for brainstorming, scenario planning, or exploring complex decision-making processes.
