

7.8 What is the Difference Between a Good Prompt and a Bad Prompt?

Good Prompt vs Bad Prompt

Good Prompt Example:

- "Craft a training manual on quality assurance procedures. Include key concepts, process outlines, and interactive elements. Ensure the training manual is engaging and facilitates knowledge transfer. The manual should be at least 2000 words and should have a formal tonality "

Bad Prompt Example:

- "Write a training manual on quality assurance."

Specific prompts yield accurate, relevant, and high-quality responses

When crafting prompts, it's essential to understand the difference between good and bad ones. A bad prompt is vague and lacks detail. For example, saying, 'Talk about Dieting,' doesn't provide enough context. This leaves the system without guidance, resulting in generic or unhelpful responses. Similarly, something like, 'When you train, you might want to focus on your shoulders,' is too brief to generate a meaningful answer.

In contrast, a good prompt is detailed and specific. For instance, a well-crafted prompt could be: 'Create a training model on quality assurance procedures, including key concepts, processes, outlines, and interactive elements. Ensure the training model is engaging, facilitates knowledge transfer, and has a formal tone.'

This prompt type provides clear instructions and enough context, resulting in a much more valuable and accurate output.
