

1.1 Bird's Eye View on Artificial Intelligence and Generative AI

Earlier, there was a time when we had manual assembly lines, and people used to do manufacturing on their own. But times have changed, and so has technology. We are in an age where robots and machines have taken over manufacturing. Similarly, online shopping behaviour has changed.

People used to go to physical stores to try and feel the product before purchasing. Now, not only are groceries and clothes purchased online, but items like aeroplanes, houses, and cars are sold via digital platforms.

There has been a significant shift in consumer behaviour. Even the digital health records are changing. We used to rely on paper health records, but now, governments promote Digital Transformation. The Current State: Transitioning from physical interactions to online services provides easy access. Moving from cash transactions to instant transfers enables Real-Time UPI. Online shopping has become essential alongside digital health records.

Everything is going online, and countries like India are taking digitalisation even further. India introduced the Unified Payment Interface (UPI), which allows real-time money transfers to be settled. This is done via mobile phones. We are currently in a state where digital is the way forward.

The Past: Traditional Practices

Physical Stores

Cash Payment

Paper Health Records
