

If you look around yourself, you will notice many things are changing. AI is now driving cars and even giving you movie recommendations. Also, many of the investment suggestions today are made by AI. Given this shift, you must embrace the usage and applications of AI, too. AI can now do various activities, from research and branding to solving office-related problems and driving business. AI is powering everything.

1.2 Understanding AI and Generative AI

When people hear the term Artificial Intelligence, they often think of robots or futuristic scenarios. However, AI is simply a system designed to simulate human intelligence, making tasks more efficient and manageable.

AI is not here to replace humans but to assist. In various sectors, including logistics, e-commerce, manufacturing, cybersecurity, HR, finance, IT, Senior Leadership, etc.
