

9.1 History of ChatGPT

ChatGPT was launched on November 30th 2022, and since then, it has taken the entire industry by storm. It is one of the fastest-growing tools in the whole history of any AI tool. Most importantly, it can perform various tasks and has great commercial applications, especially passive income avenues, which will be discussed later.

ChatGPT is the fastest mobile application to reach 100 million monthly active users (MAUs), beating apps like TikTok, Instagram, Pinterest, Spotify, Telegram, Uber, and Google Translate. Its closest competitors in this category, TikTok, Instagram, and Pinterest, took 9, 30, and 41 months, respectively, to reach 100 million MAUs. However, ChatGPT scaled this peak in just 2 months.

This is a commendable achievement. It is an example of the recent acceleration of AI tool adoption. By the time you read this, they may have scaled higher peaks.
