

It automates repetitive tasks, allowing professionals to focus on creative and strategic work. It's a tool to simplify challenges, not a force to take over roles.

Generative AI, a specific subset of AI, goes further by creating original content, such as text, images, or music, through advanced deep learning algorithms.

1.3 What Is Machine Learning?

Machine Learning (ML), a critical branch of AI, involves systems that learn patterns from data to make predictions and decisions. For example, weather forecasting relies on ML to analyse historical data and predict future trends.
