

Using AI as a virtual CEO to solve business problems

You can turn to AI as a virtual CEO to help you address business challenges and strategise growth. In this example, you said that you are a freelance accountant earning ₹1 lakh per month but aiming to scale up to ₹2 Lakh, and you prompted ChatGPT to act like a CEO and help you with a scaling-up plan. You asked for a plan to work with your limited resources and time.

Here, you gave ChatGPT a clear role (CEO) and a clear problem statement of how to scale up business revenue with limited resources and time. With this context, AI can provide actionable, tailored advice, much like a human CEO, instead of generic recommendations.

Using AI as a virtual CEO to solve business problems

Assigning roles in ChatGPT prompt

I am freelance accountant, I am stuck between revenue of RS. 1,00,000 per month. I am unable to scale up, My aim is to get to Rs. 2,00,000 per month. Act like a CEO and help me with scaling up plan and ideas. Give me professional advice like a matured CEO keeping in mind I have limited resources and time.

Memory updated

To scale up your freelance accounting business to Rs. 2,00,000 per month, here's a step-by-step professional strategy that balances resource constraints, time limitations, and the importance of sustainable growth.

1. Audit Your Current Operations

- **Client Segmentation:** Identify your most profitable clients and services. Focus on the clients that contribute to 80% of your revenue (Pareto Principle). Are there clients taking up too much time for lower returns?

These are the suggestions made by ChatGPT.

Audit current operations

It suggested identifying your most profitable clients and focusing on the top 20% contributing to the most revenue. It advised reallocating time to higher-paying clients or increasing prices for clients that take up more time with lower returns.
