

Expand service offerings

It recommended leveraging your bookkeeping, financial forecasting, and tax planning expertise to enhance services.

Optimise pricing strategy

Suggestions included introducing tiered pricing, allowing clients to pay for faster turnaround times, and considering value-based pricing for high-impact services.

Seek client referrals and build a personal brand.

It encouraged tapping into existing clients for referrals and building your brand presence for new market opportunities.

9.4.3 Increase Project Management Efficiency.

Generative AI can perform tasks like task assignments, progress reports, survey analysis, commercial analysis, and buyer personas to improve project management efficiency. Let's see how this happens with a few examples.

Task Assignment

First, you outlined the tasks and the number of team members available. Then, ChatGPT allocated responsibilities and assigned tasks to each person along with estimated timelines, making it easy to track work progress.

ChatGPT allocates tasks, assigns roles, and set timelines for progress

Task Assignment Plan

Team Members:

1. Team Member 1 (UX/UI Designer)
2. Team Member 2 (Data Analyst)

Tasks:

1. UX/UI Design
 - Team Member 1:
 - Research & Analysis (2 days): Conduct research on user needs and preferences. Analyze competitors' designs and gather insights.
 - Wireframing (3 days): Create wireframes for the application or website, focusing on layout and user flow.
 - UI Design (4 days): Develop high-fidelity designs, including color schemes,
