

9.5 What can ChatGPT not do?

Before discuss some advanced use cases of ChatGPT, let's look at some things that ChatGPT cannot do. From our experience so far that some things that ChatGPT cannot do are:

- Search the internet
- Crawl a website and get data
- Give your answers to your data
- Perform research

If you want some of the latest information, ChatGPT will not be able to help you. ChatGPT also cannot crawl a website and get data. For instance, if you ask it to go to hiteshmotwani.com, scrape some content, and make a presentation, you will need help.

ChatGPT cannot give you answers on the data you upload. If you have some reports in PDF format or a spreadsheet full of valuable data, you cannot use ChatGPT to get insights into such data. ChatGPT is also not equipped to perform research on your behalf.

These are some of ChatGPT's limitations. However, these limitations do not apply to ChatGPT 4.0, the paid version of ChatGPT. So, you cannot make ChatGPT do these things in the free version.

9.6 Advanced use cases of ChatGPT

Let's see how you can work around these limitations with advanced hacks. To use these advanced hacks, you must install WebChatGPT: ChatGPT with internet access and a Chrome extension.

Overcome limitations using WebChatGPT Chrome extension for internet access.
