Customer Service

- Inbound & outbound scripts
- Email response management
- Objection handling
- Complaint handling
- Query resolution
- Grammar check

The IT department could accelerate software development with AI tools. Product managers could brainstorm a new product idea and form prototype development ideas. Chief Experience Officers (CXOs) and others who enhance user experience could use AI tools to analyse market trends, form insights on business strategies, and build competitive intelligence reports.

Through AI tools, a supply chain professional can do some logistic planning. These tools can even be used to review legal documents.

So, the possibilities are endless with AI tools. It is up to you to make the most out of them.
