

Let’s first understand how ChatGPT can generate spreadsheet formulas. The above sheet shows that the first task would be to fill cell G2 with the full address based on the details mentioned in the previous cells.

For this exercise, let’s assume a complete spreadsheet novice. So, enter a prompt on ChatGPT saying,

I have data from A to F, and I want this in column G. Also, my data starts from A2.

ChatGPT

To put your data from columns A to F into column G, starting from cell G2, you can use a formula or a simple copy-paste method. Here's how you can do it:

1. Using a formula:

In cell G2, you can use a formula like this:

Copy code

```
=A2 & B2 & C2 & D2 & E2 & F2
```

This formula concatenates the values in cells A2 through F2. You can drag this formula down to apply it to other rows if needed.

If you do not specify that the data starts from A2, ChatGPT might provide a formula relevant to row 1, which would be wrong. When you enter the prompt, the following response is received.

ChatGPT is asking to copy the code and paste it into cell G2 using a concatenating formula.

	A	B	C	D	E	F	G
1	Address 1	Address 2	Address 3	Address 4	City	Pin code	Full address
2	Khimnagar	B 10 31	Santacruz west	SV road	Mumbai	400054	KhimnagarB 10 31Santacruz
3							
4		Flat number	Address	Pin code			
5	Flat 101, 123 Main Street, Springfield, 12345						
6	Flat 202, 456 Elm Avenue, Lakeside, 23456						
7	Flat 303, 789 Oak Lane, Rivertown, 34567						
8	Flat 404, 987 Pine Road, Mountainville, 45678						
9	Flat 505, 654 Maple Drive, Meadowview, 56789						
10	Flat 606, 321 Cedar Court, Sunnyside, 67890						
11	Flat 707, 876 Birch Street, Hillcrest, 78901						
12	Flat 808, 543 Willow Lane, Brookside, 89012						
13	Flat 909, 210 Ash Avenue, Valleytown, 90123						
14	Flat 1010, 987 Cherry Lane, Beachside, 01234						

There is a problem- no spaces between every concatenated field
