

However, there is a problem- no spaces between every concatenated field. So, return to ChatGPT and enter a prompt saying,

I want spaces in the middle.

Problem solution

ChatGPT

If you want spaces between the concatenated values from columns A to F, you can modify the formula like this:

```
arduino
Copy code

=A2 & " " & B2 & " " & C2 & " " & D2 & " " & E2 & " " & F2
```

This formula will concatenate the values from cells A2 to F2 with a space between each value. Drag this formula down to apply it to other rows if necessary.

Simply copy the formula and enter it in the same cell.

	A	B	C	D	E	F	G
1	Address 1	Address 2	Address 3	Address 4	City	Pin code	Full address
2	Khirnagar	B 10 31	Santacruz west	SV road	Mumbai	400054	Khirnagar B 10 31 Santa
3							
4		Flat number	Address	Pin code			
5	Flat 101, 123 Main Street, Springfield, 12345						
6	Flat 202, 456 Elm Avenue, Lakeside, 23456						
7	Flat 303, 789 Oak Lane, Rivertown, 34567						
8	Flat 404, 987 Pine Road, Mountainville, 45678						
9	Flat 505, 654 Maple Drive, Meadowview, 56789						
10	Flat 606, 321 Cedar Court, Sunnyside, 67890						
11	Flat 707, 876 Birch Street, Hillcrest, 78901						
12	Flat 808, 543 Willow Lane, Brookside, 89012						
13	Flat 909, 210 Ash Avenue, Valleytown, 90123						
14	Flat 1010, 987 Cherry Lane, Beachside, 01234						
15							

Place commas between each field

Now, after satisfying with the result. Place commas between each field, but you would not need to return to ChatGPT to create that formula since you learned how the concatenating formula works.

Now, let’s look at another example. Suppose you want to separate the data present in each cell from A5 to A14 into flat numbers, addresses and pin codes.
