

Then, go to the data tab and in the 'Sort & Filter' section, click on the 'Z to A' button to sort the data in descending order.

You can verify that the order of the customer names and their respective sales figures are correct. So, you can conclude that ChatGPT carried out this function well. Now, let's move one step further and ask ChatGPT to generate relevant bar charts, graphs, and data points that can assist you in increasing sales.

Can you give me relevant bar charts, graphs, and data points that can assist me with increasing sales?

ChatGPT generated new formulas

ChatGPT

Certainly! To assist with increasing sales, we can create visualizations focusing on key areas such as:

1. **Sales Trends Over Time** - A line graph showing sales over time to identify seasonal trends or particular months with high sales.
2. **Product Category Performance** - A bar chart to compare sales across different categories and sub-categories to see which are performing best.
3. **Customer Segments** - A pie chart or bar chart showing sales distribution across different customer segments (e.g., Consumer, Corporate, Home Office) to determine where to focus marketing efforts.
4. **Geographic Distribution of Sales** - A map or bar chart showing sales by regions or top cities to identify strong and weak geographical markets.
5. **Profit Analysis** - A scatter plot correlating sales and profits to identify the most profitable products or services.
