

11.2.1 Stable Diffusion

The first tool to use is what you call stable diffusion. How you have chat GPT in the realm of text-to-text, you've got stable diffusion in the realm of text-to-image. Let's see how this tool works.

You simply go to their website- stable-diffusion-web.com. This is a half-free, half-paid website. Then, simply give a text prompt, saying, 'Dog wearing a sunglasses, sitting on a beach, having a coffee.'

This is a very complex prompt so let's see what happens when you click on the 'Draw' button.

On the next page, you can select one of the available styles, including cinematic style, analogue film, line art, clay, pixel art, and photographs. You can choose whatever you want. If you look at the screenshot below, you will see the cinematic style.
