

Let’s see how you can build a text-to-voice solution for ourselves and the kind of tools available to do so.

Task	Tool
Create voice-overs	Clipchamp
Make audiobooks	Natural readers
AI-based podcasts	Murf AI
Make songs	Suno.com

You are going to see how to make voiceovers using a tool called Clipchamp. The good thing about Clipchamp is it can generate audio for you in any language of your choice. If you want more of the natural-sounding audio, you can go to naturalreaders.com. If you want to basically build your own podcast, you can use Murph.ai.

You will also understand how to build songs using Suno.com. Let’s get right into it.

11.3.1 Clipchamp

First, you will see how Clipchamp works. You need to go to Clipchamp.com and make a free account. Since this is a subsidiary of Microsoft, so it’s absolutely free.
