

In opinion, parts of the voiceover were robotic, but it was not that bad considering that this is just the beginning of AI tools, to be very honest. In the future, hundreds of AI tools can do a much better job than this.

The thing to remember is that you're able to simulate a conversation between two people, all using AI tools. But it's still a work in progress, you would say. It's not there yet, but it is just the beginning.

So, here are some AI tools you can use for voice generation: Clipchamp, NaturalReader, and Murf AI.

Now the question is, can AI build a song? Well, yes, you can do that as well.

11.3.4 Suno.com

Let's see how to make songs using AI through a website called suno.com. Once you go to suno.com, you can pick and choose and just prompt for a song for yourself.
