

11.4 Text-to-Video

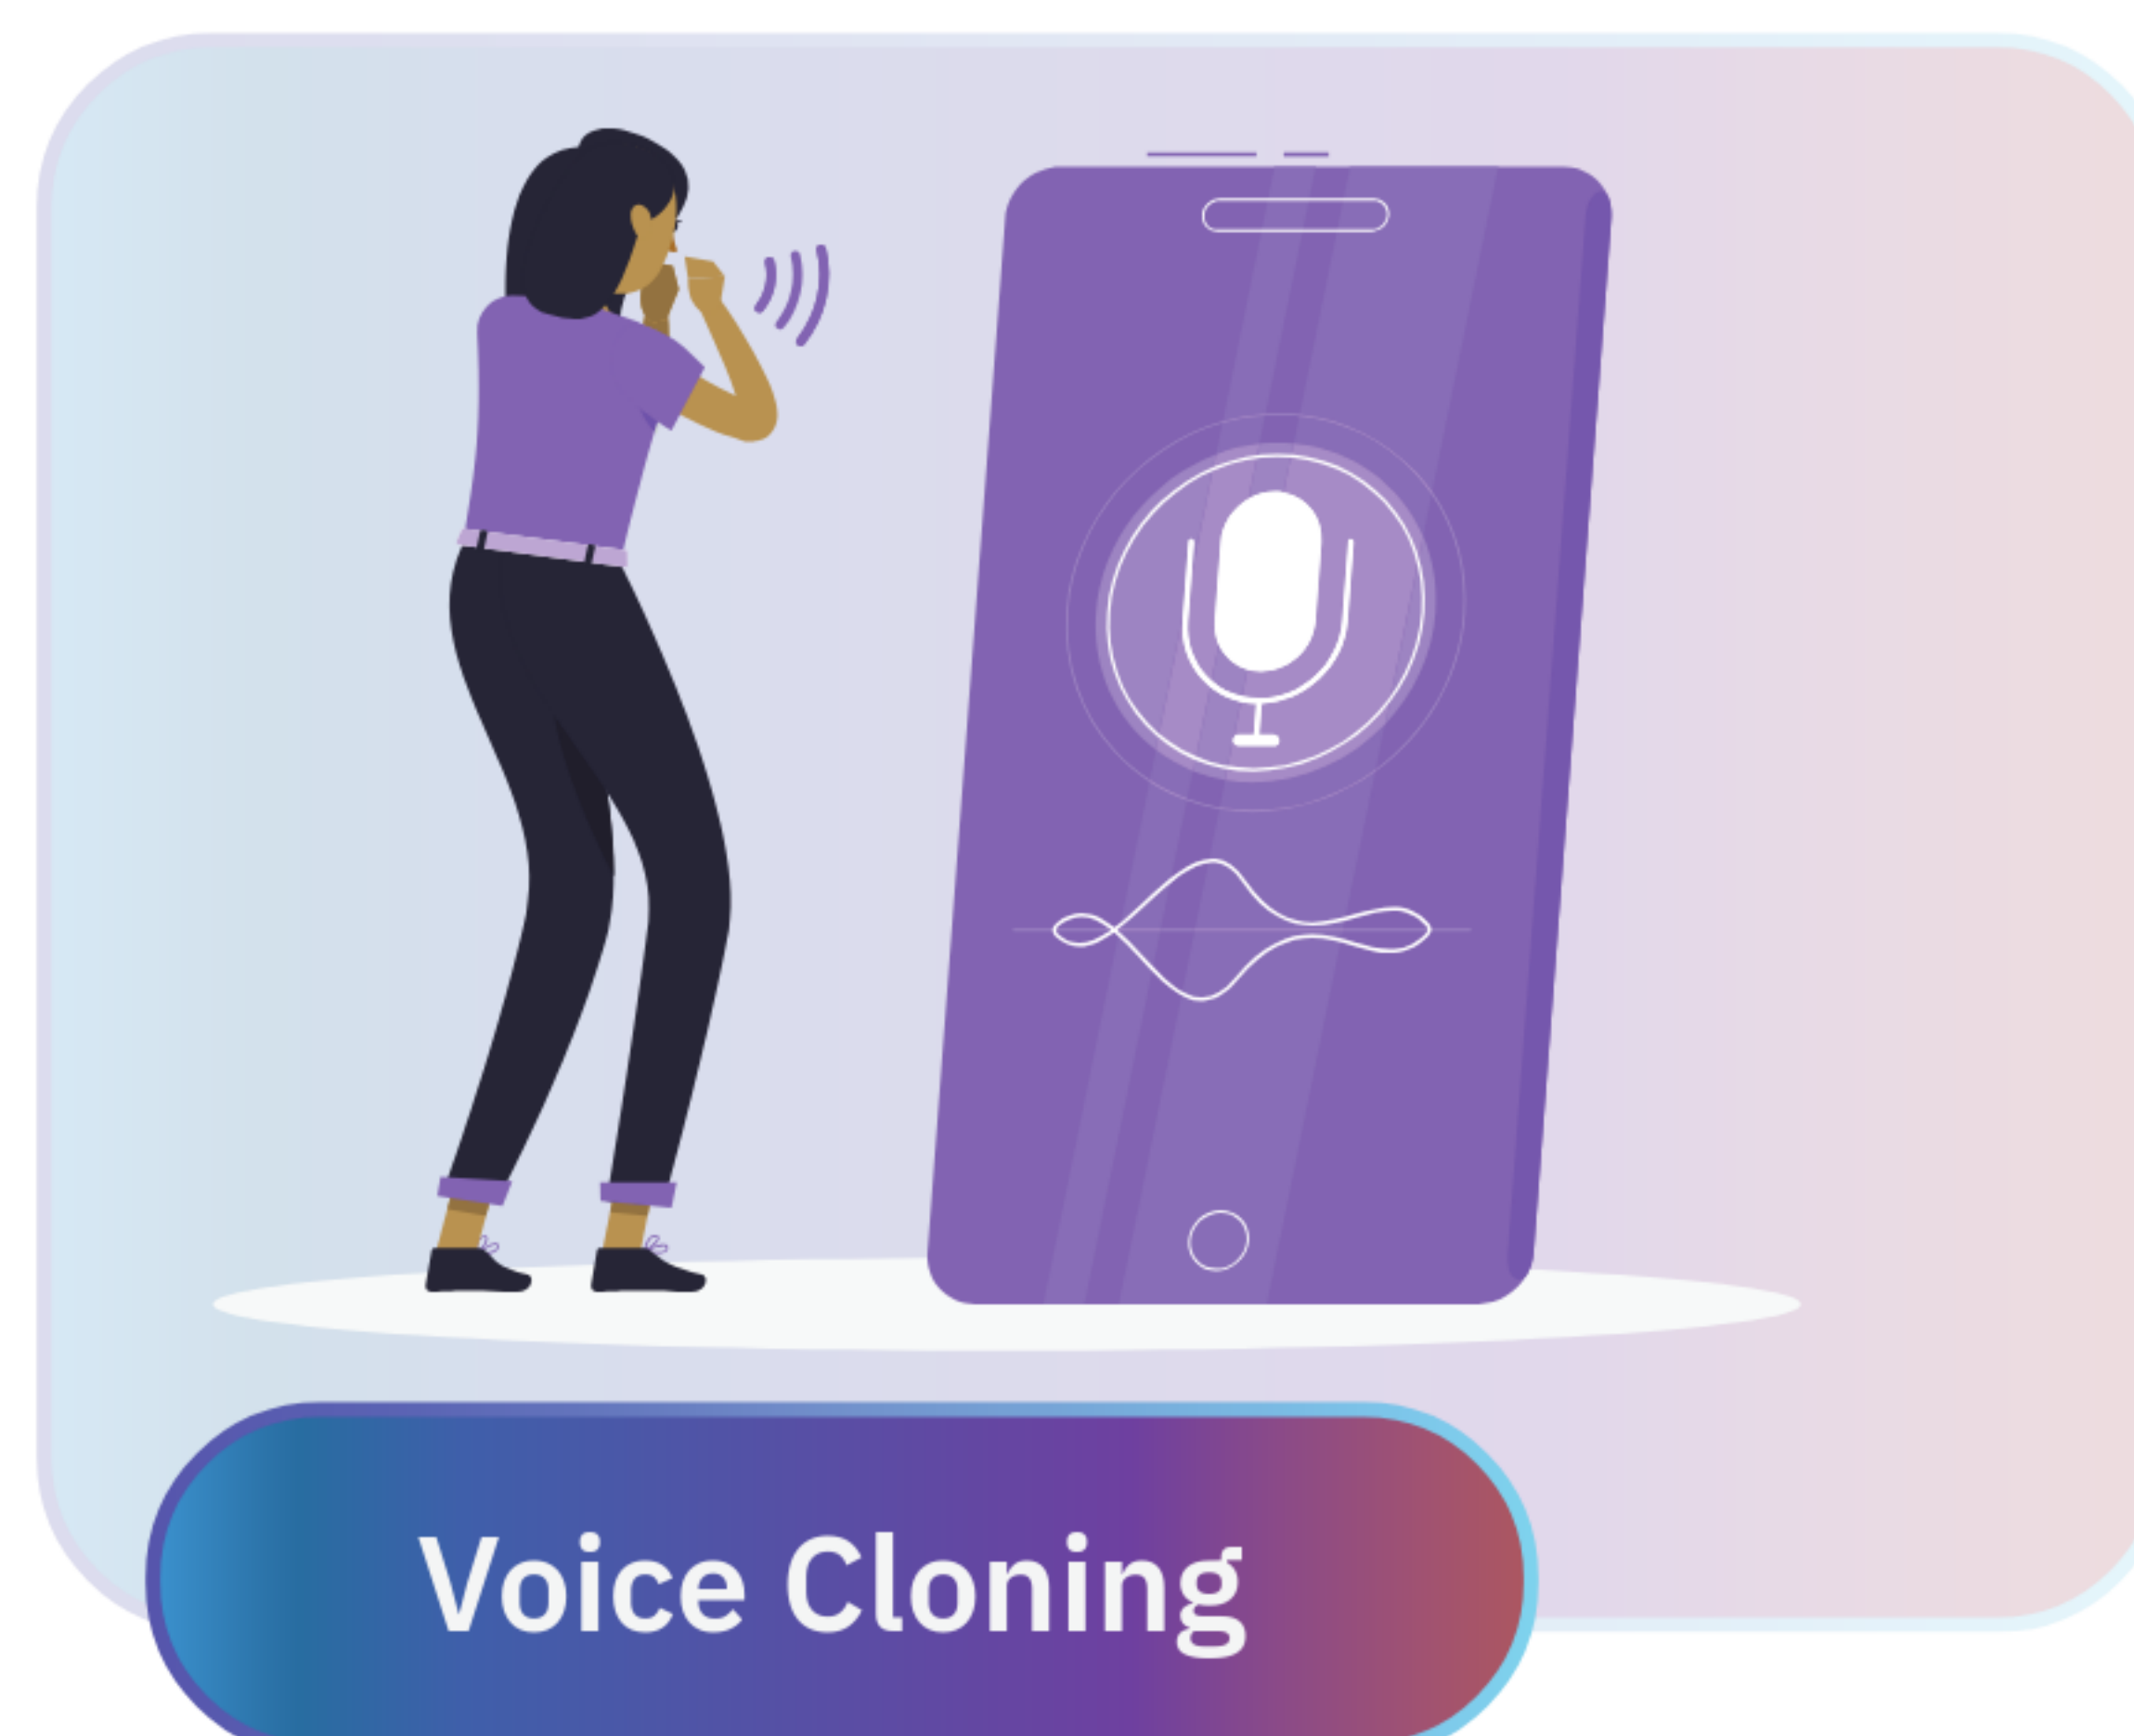

Generative AI has already made waves in text and image generation but can AI really impact the video generation space? Yes, absolutely. You can perform video-related tasks with AI, from video-making and editing to making video avatars. Through AI, you have come a long way in creating videos at scale.

AI tools may not be as good as other tools in the market. However, they still offer a high level of efficiency. It is a good alternative for people who do not have enough resources but would like to build a brand.

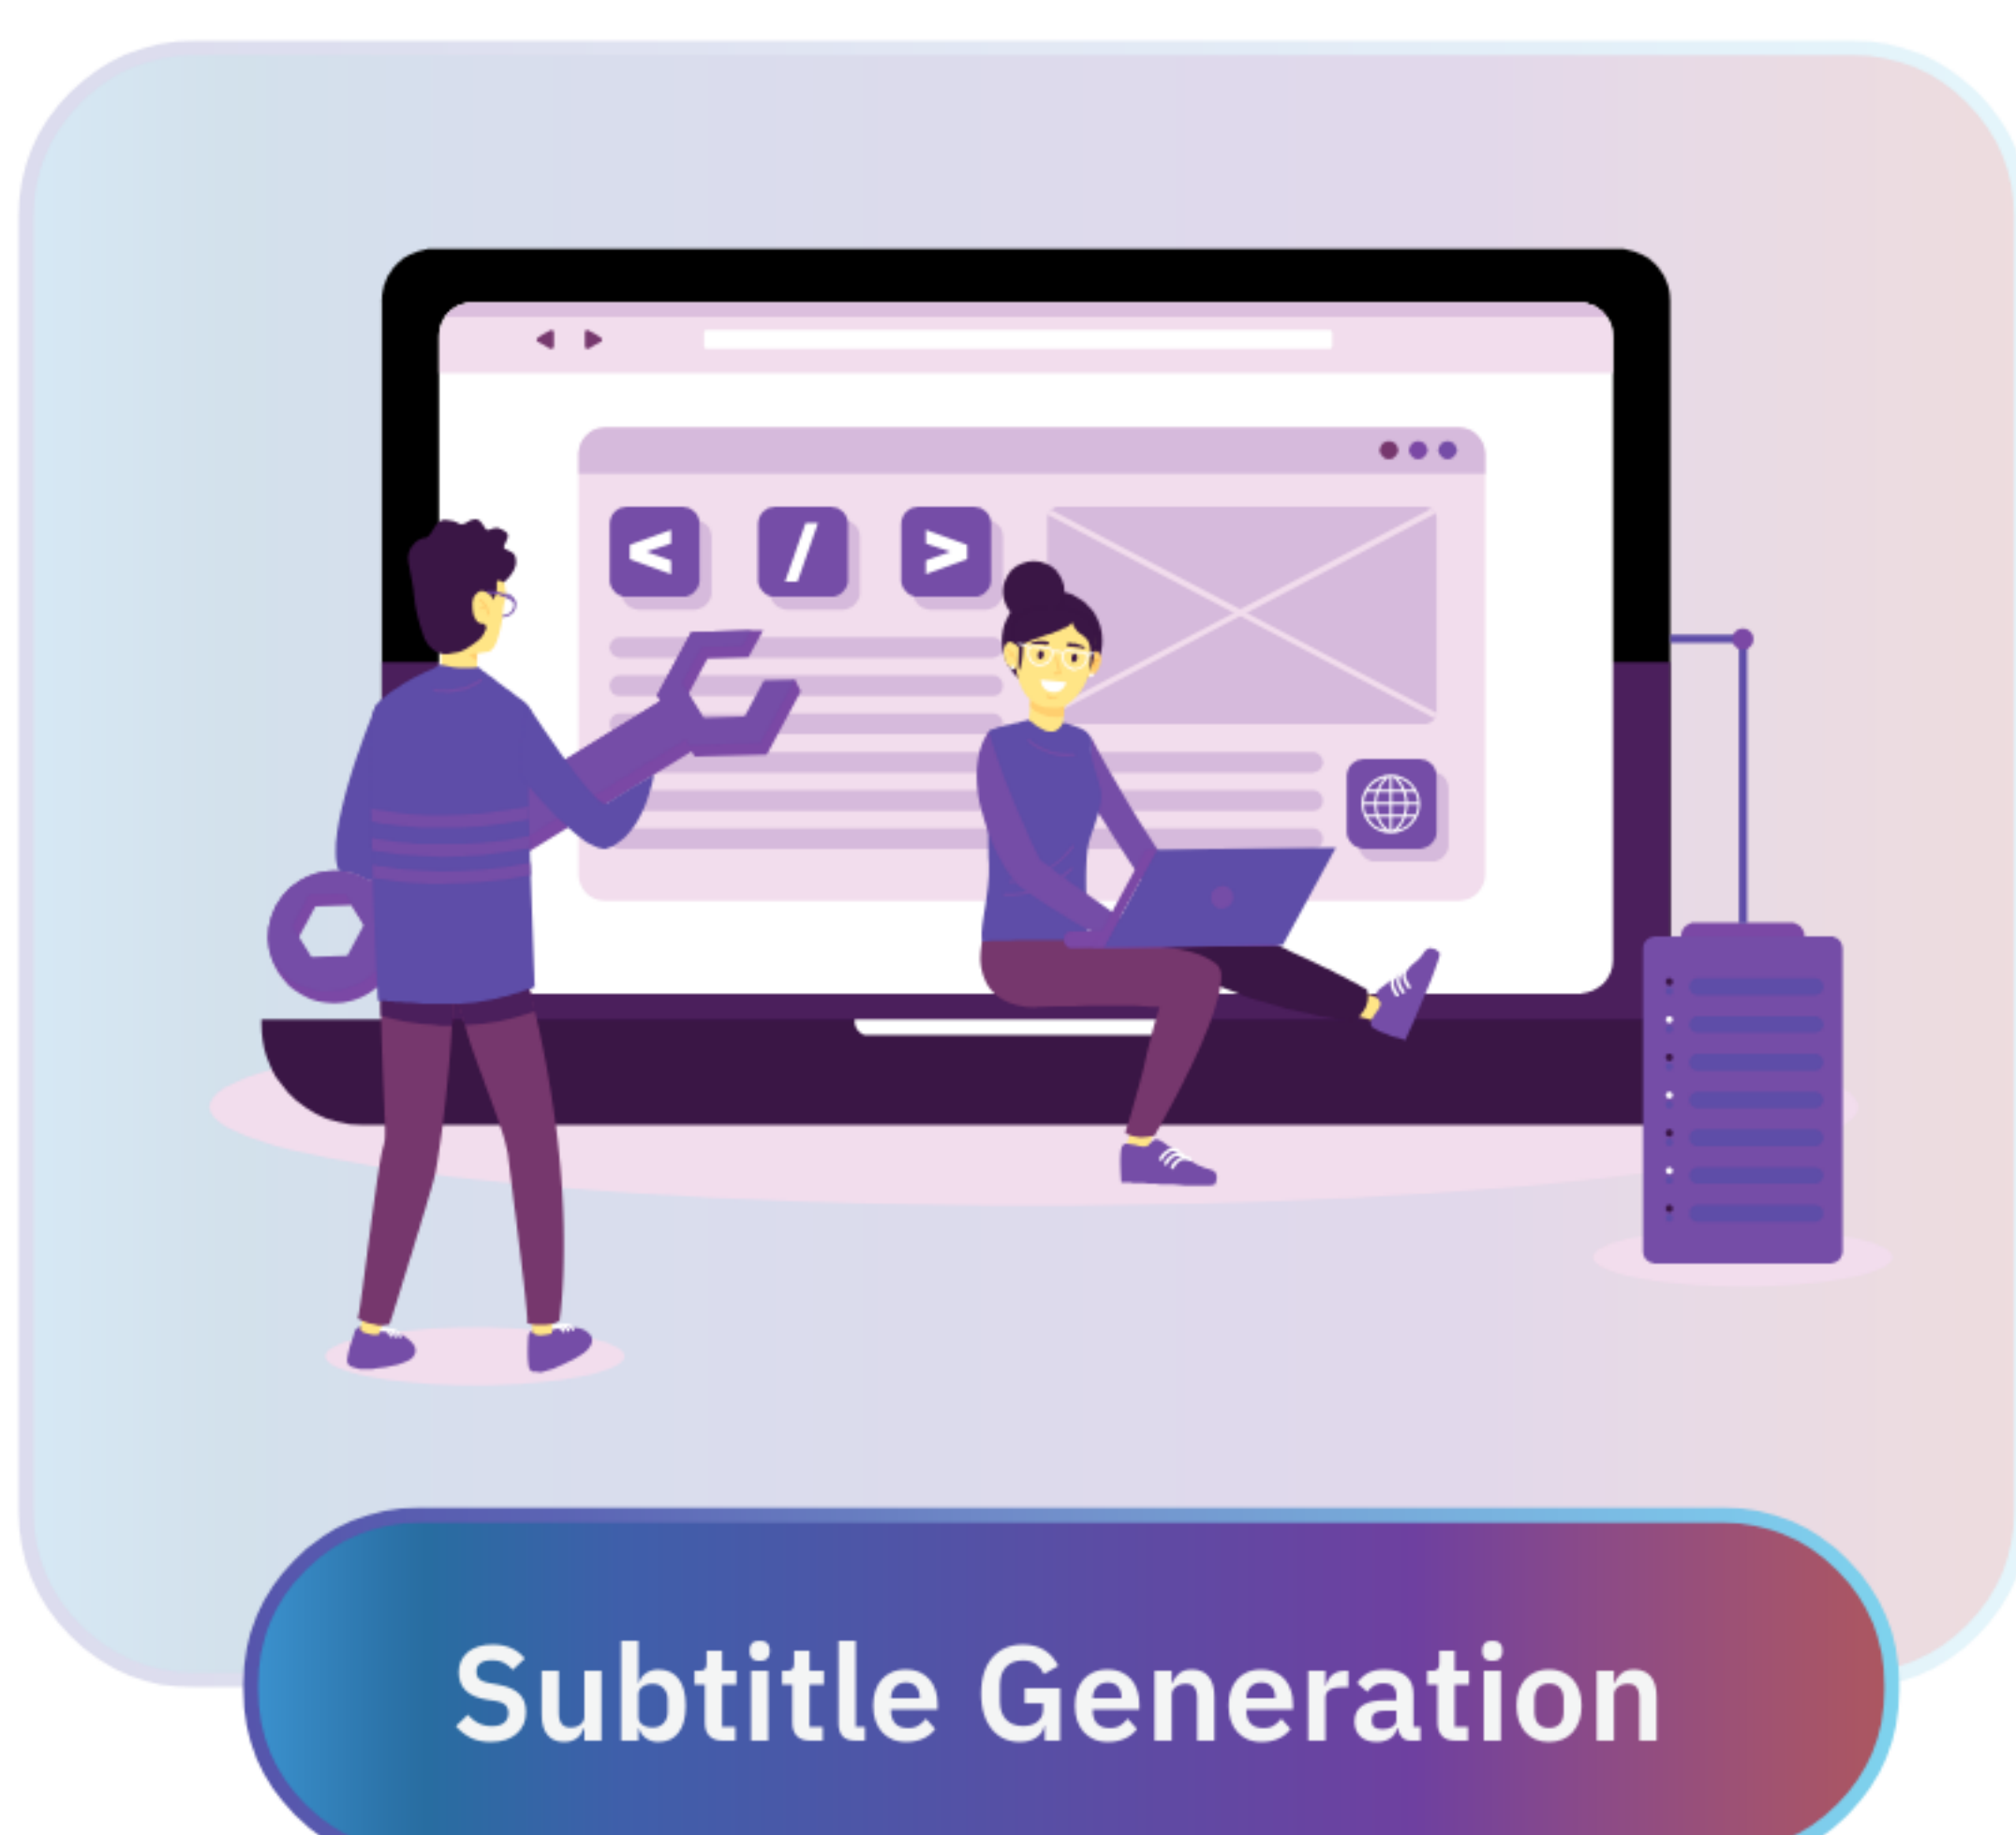

First, let's understand how AI generates videos. AI-powered tools enable users to create professional quality videos at the lowest price. In fact, AI has reached a stage where it can perform tasks like cutting, adding effects, and generating videos from text. Some of the areas that AI has mastered are:

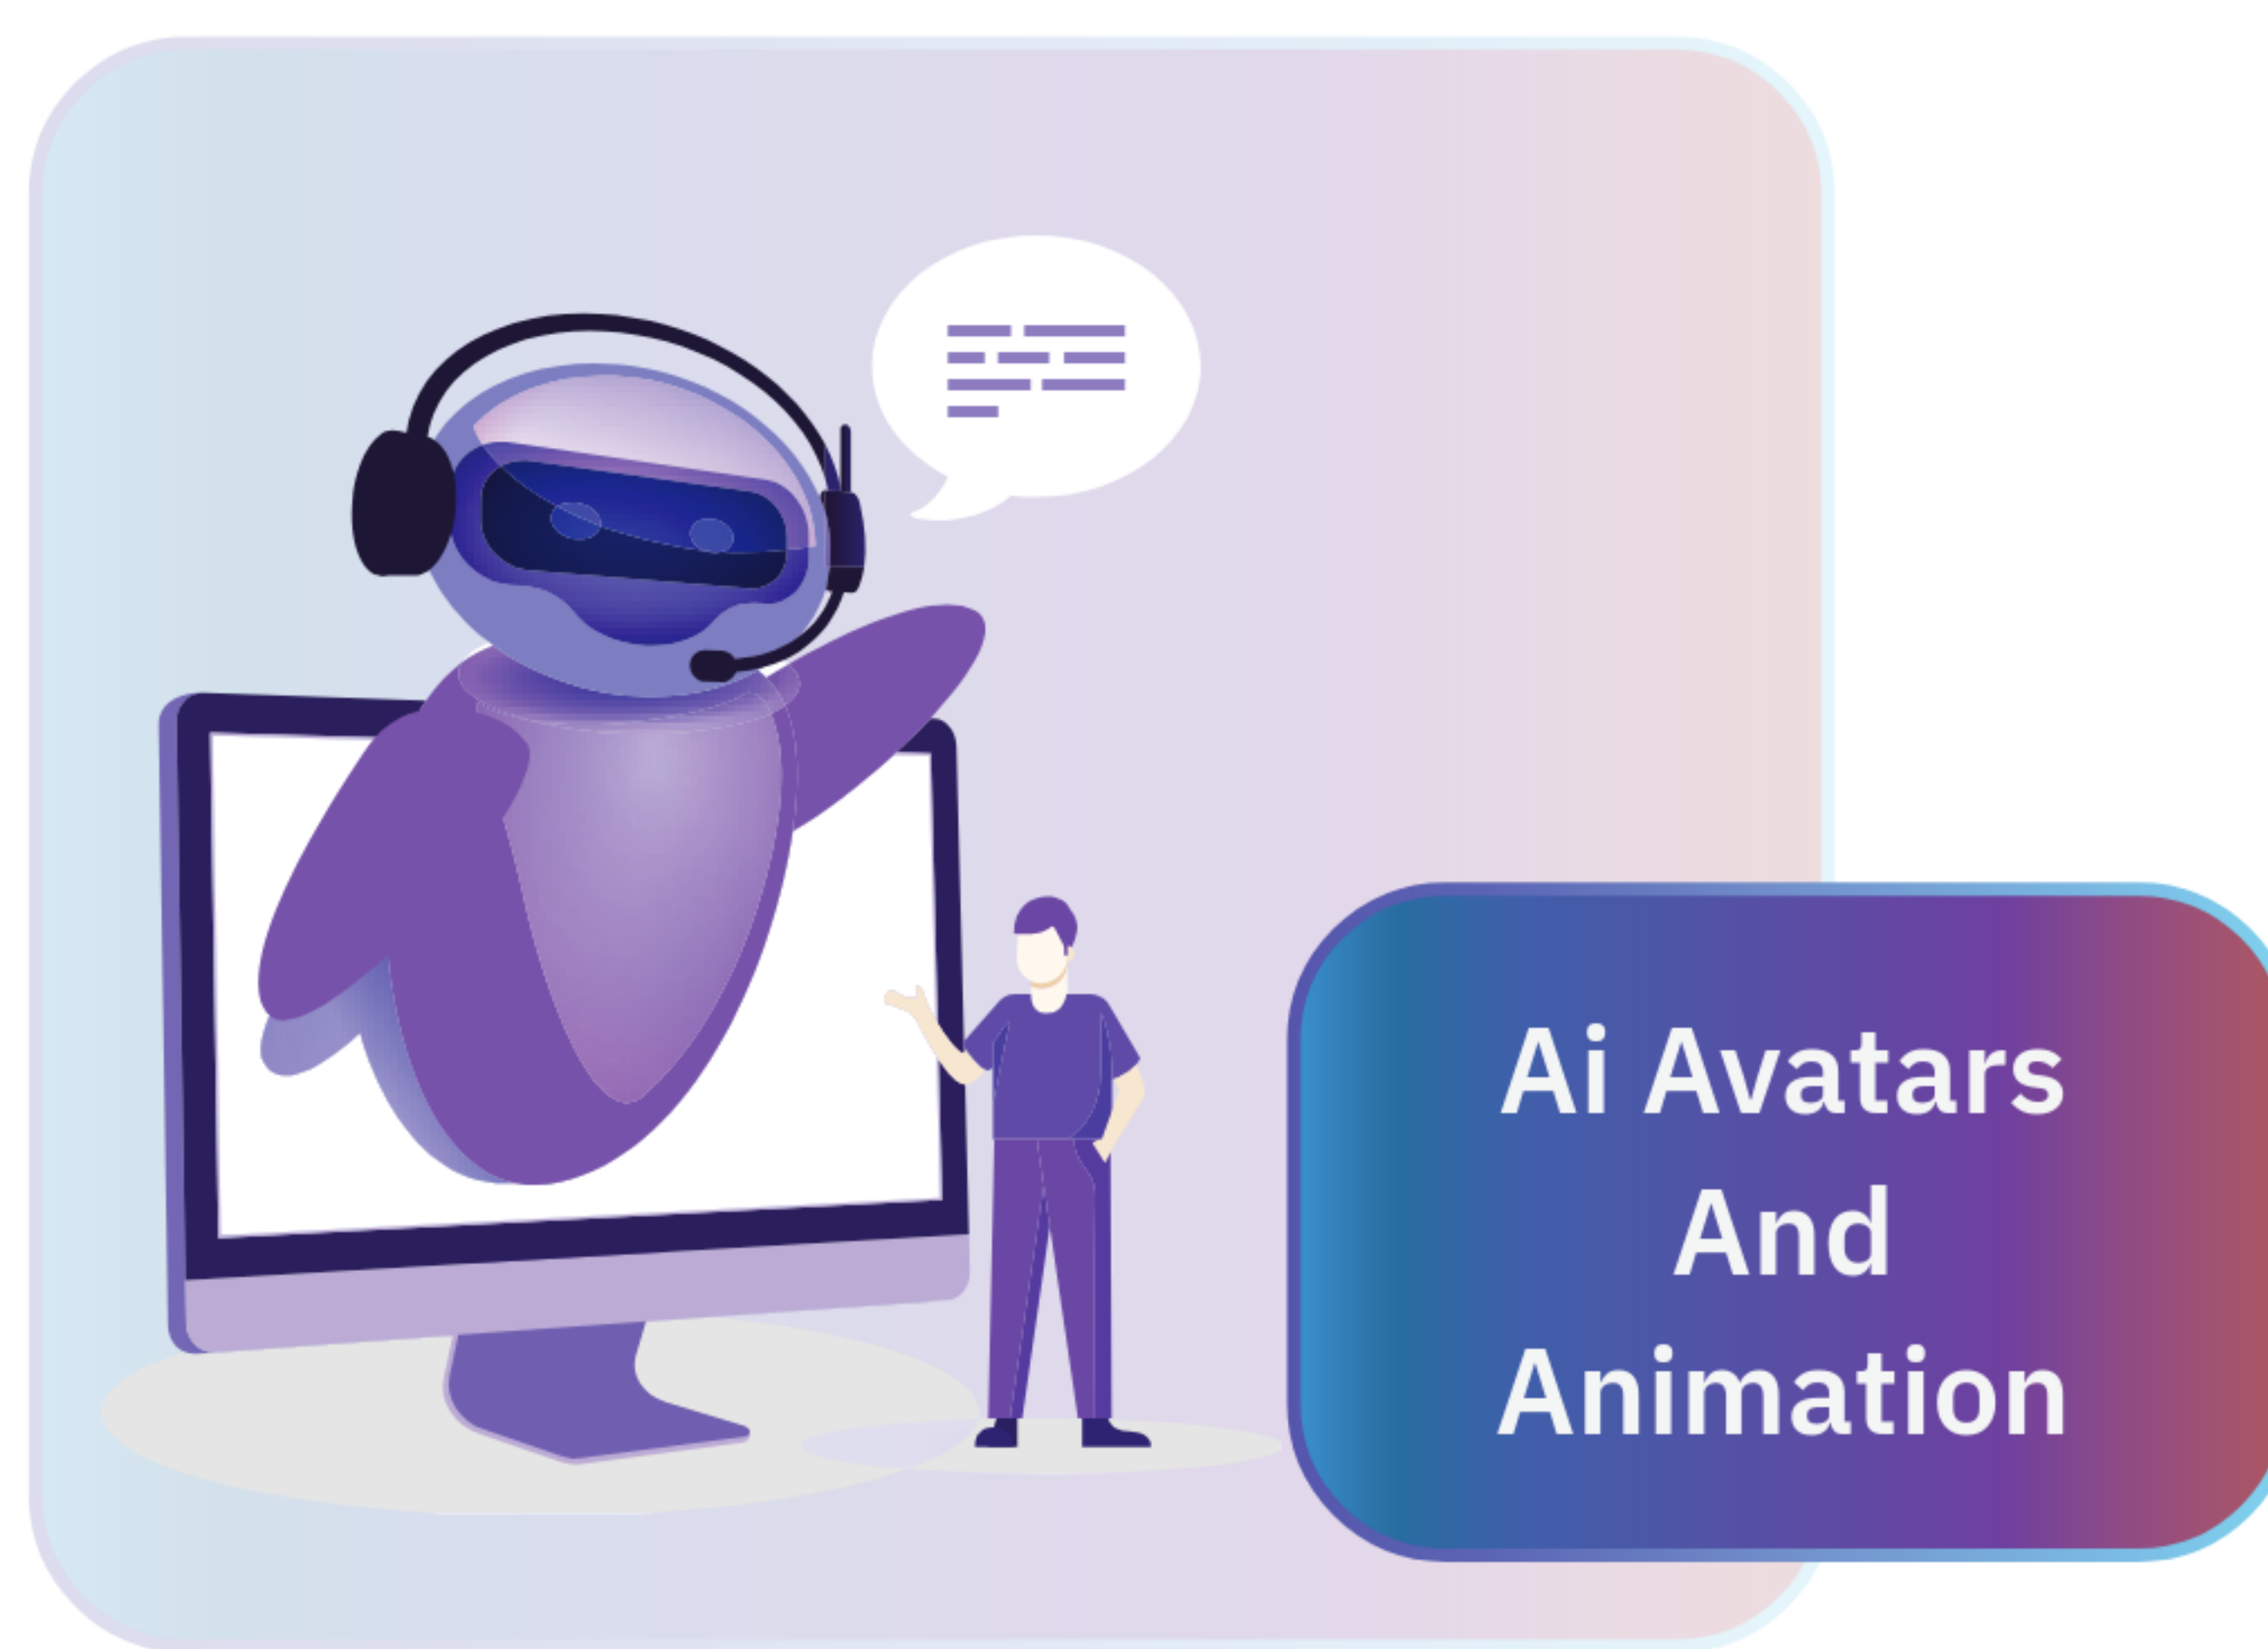

Video Editing

Voice Cloning

Subtitle Generation

Ai Avatars
And
Animation
