

Video editing professionals may find that video-related AI tools have less customisability than what they are used. They may feel discouraged by the learning curve. Scammers and other criminals could use the voice and appearance data stored in AI tools to create fake videos.

Some of the types of videos you can generate are:

Types of Videos You Can Create with AI

- **Text-to-Video**
 - AI tools convert written scripts into animated videos
- **AI-Generated Avatars**
 - Videos featuring AI-generated or customized avatars
- **Automatic Subtitling & Voice Cloning**
 - Add auto-generated subtitles and cloned voices
- **B-Roll Editing**
 - Automatically adds relevant B-roll clips during video edits
- **Image-to-Video**
 - AI tools that convert static images into dynamic video sequences

Some of the practical use cases of AI video tools are:

Practical Use Cases for AI Video Tools

- **Content Creation**
 - YouTube videos
 - Social media videos
 - Vlogs
- **Marketing**
 - Engaging product demos
 - Explainer videos
- **Corporate Training**
 - E-learning videos with AI avatars
 - Quick and easy production
- **Automated Subtitles & Voiceover**
 - Simplifies editing process
