

11.4.4 Avatar-Based Videos

The last type of tool is for avatar-based videos. First, let's check out the HeyGen tool. The previous video that you used for subtitles was generated with HeyGen.

HeyGen is a video tool that can make your deepfakes. You need to upload your creatives and, if possible, a 10-minute video recording. Then, HeyGen will create your avatar and you can give it a voice-over so it generates a real video for you.

This is a paid tool. You are focusing on free tools, you are going to choose a tool called Tokking Heads.

This tool can make a video for you without any video clips but just with your image.

Once you open their website, click on generate Tokkinghead.
