

11.4.5 Wise Cut

Wise Cut is a cloud-based AI video editor that simplifies video editing by automating several key tasks, such as placing jump cuts, adding background music, and removing awkward sounds. It offers a range of options, including auto-cutting silences, punch-ins, and built-in captions, all customisable for different editing needs.

You can see some of the automated editing features available on this tool in the below image.

Customisable for editing

11.4.6 Submagic

Submagic automatically generates captions and allows users to add B-rolls to their videos. Once a video is uploaded, Submagic can quickly produce captions in numerous customisable styles to suit different aesthetics. Additionally, the tool lets users seamlessly insert B-roll clips by selecting relevant scenes and topics, enhancing the visual storytelling without extensive manual editing.

Thus, Submagic can be an efficient, easy-to-use solution for creating professional videos with minimal editing effort.
