

With generative AI, you can code 10 times faster than before. You can also learn new languages. For example, if you are a Python developer but want to learn Django or Java, you can do so with generative AI. Most importantly, generative AI can automate your mundane tasks very well. You can even use AI to drive your business goals.

Many LLMs have partnered with integrated development environments (IDEs) to come up with tools like GitHub Copilot, Codeium, Tabnine, and Replit. They can work within your existing IDE to code for you.

Some of the use cases of ChatGPT in coding are as follows:
