

12.2 Best LLM Options For Coding

To write code, you can use the same LLMs used for content and media generation. You can use OpenAI's ChatGPT, Bing's Copilot, Google's Gemini, and Anthropic's Claude 3. All these tools are capable of writing amazing code.

ChatGPT and other LLMs are not just limited to Python. They can also be used for coding in different languages, such as:

Python

Widely used for its simplicity and powerful libraries.

JavaScript

Essential for web development and interactive web applications.

Java

Popular for enterprise solutions, Android app development, and more.

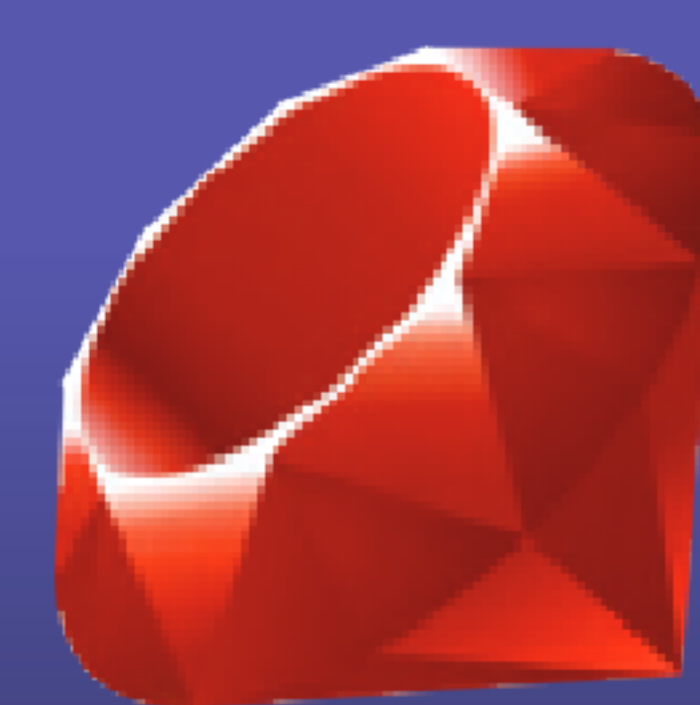

C++

The programming language used in system/low-level programming, game development, and applications where performance is crucial.

C#

It is mainly paired with the .NET desktop, web, and game development framework.

Ruby

A language used mostly for web development; it's majorly known for Ruby on Rails.
