

PHP

This language is mainly used for server-side web development.

TypeScript

It is a superset of JavaScript, adding static typing to the language.

Swift

It's an integral language for iOS and macOS applications.

Go

Known for its simplicity and efficiency in system and network programming.

Rust

Fast rising in system-level programming tasks, it places great emphasis on safety and concurrency.

SQL

Relational Database Management with relational manipulation.

No matter which technology or language is used, LLMs help one do it more efficiently and quickly. These LLMs have been trained on all the publicly available data on GitHub and Stack Overflow, which enables them to code very easily.
