

Once ChatGPT had written the HTML structure, copied it, opened Visual Studio, selected the folder you had created for the to-do list application, and created a file called 'index.html' where you pasted the code and saved it.

Past code into index.html

Then, go back to ChatGPT and copy the CSS code. Since ChatGPT kept the file name styles.css, create a file on Visual Basic by the same name. Then, paste the CSS code into the file.

ChatGPT's Answer

2. CSS for Styling

Next, let's add some CSS to make the app look more appealing. Create a 'styles.css' file in the same directory as your HTML file.
