

AI-Powered Coding: Writing Code with Generative AI

EXERCISE

Instructions:

Read the scenario and craft an optimized prompt using generative AI for coding tasks.

Scenario:

Read the scenario and craft an optimized prompt using generative AI for coding tasks.

Task:

Write a structured prompt that helps an AI tool generate or improve code for your project. Your prompt should::

1. Specify the programming language (e.g., Python, JavaScript, C++)
2. Define the task (e.g., building a to-do list app, debugging an error, converting code to another language)
3. Set expectations for output format (e.g., structured code, comments, best practices)

Write your optimized prompt below:

Reflection:

How can AI-assisted coding improve software development? Give one example.
