

An organisation must note the data feed to their virtual assistants or chatbots and the training methods. Similarly, departments most likely to use Generative AI must spend some time creating standard operating procedures.

Once such documentation is ready, it must be distributed and available to all organisation members.

2. User Communication

When you receive an automated email, there is always a message like, 'This email was autogenerated. Please do not reply.' Such communication helps users understand the limitations of whatever they are interacting with.

Similarly, users must know when they are interacting with AI-enabled chatbots. At the same time, the limitations of the chatbots and their requirements must also be communicated. It is essential to provide clear, understandable information about the system's functionality, limitations, and the nature of its outputs.
