

3. Establishing Accountability

“A computer cannot be held accountable. Therefore, a computer must never make a management decision.” This is a quote believed to have originated from a 1970s IBM presentation.

Although AI is powerful, you cannot hold computer software accountable when things go wrong. Responsible individuals with a strong standing in the organisation must oversee AI ethics, manage risks, and address issues. They should define clear roles and responsibilities and get the top management go-ahead for important initiatives.
