

13.2 Implications for Enterprises

As a business, you should be mindful of the following things when you are dealing with AI:

13.2.1 Regulatory Compliance

Gen AI itself is a nascent technology. You forget This fact because of how revolutionary it has been and how quickly users are adopting it worldwide. Since this is a nascent technology, regulations relating to gen AI are still being developed. Adapting to an evolving regulatory landscape presents a significant challenge for enterprises.

Organisations must proactively align their AI strategies with existing and emerging regulations to avoid legal repercussions. This includes creating detailed documentation of AI models, their usage, and potential risks.

13.2.2 Governance structures

Enterprises must establish a core governing body with representatives from various functions to oversee AI initiatives. Their responsibilities should include setting clear objectives and roles and ensuring alignment with ethical principles. This will go a long way in managing gen AI within enterprises.
