

Companies like OpenAI, Google, and Anthropic have dominated the space of conversational AI. You might have heard of ChatGPT, a generative AI model developed by OpenAI. Bing, a search engine managed by Microsoft which integrates with ChatGPT-4, a conversational AI model by OpenAI.

Among the various conversational AI players, Google is one of the inventors in this industry. For a long time, Google has been dominating this space. Earlier, they had a tool called Pathways Language Model (PaLM), then they came out with the Google Bard, and now they have come out with Google Gemini. Gemini is the latest version of the conversational AI chatbots Google has released.

The third significant player is an emerging company called Anthropic. They made a tool like ChatGPT called Claude. There are many other players in the conversational AI space. A company named Mistral has a similar conversational AI capability. However, the leading players in the industry today are OpenAI, Google, and Anthropic.

By the time you read this chapter, these top 3 players might have changed their offerings, and they will keep on evolving, so make sure you check their website before choosing which AI model to choose.
