

ABOUT THE AUTHOR

Hello, I'm Hitesh Vijay Motwani—a recovering fintech professional turned Generative AI enthusiast. From crunching numbers in banks and asset management companies to decoding neural networks, my journey has been anything but ordinary. If you told me a decade ago I'd be teaching thousands about artificial intelligence, I'd have probably laughed (or nervously nodded pretending to understand).

Fast forward to today, I've spent over 17 exciting years training more than 2,00,000 people across 16 countries, making Generative AI practical, accessible, and dare I say, fun! Over the last couple of years alone, I've empowered 250+ companies, including renowned brands like Tata Group, Flipkart, LG, HP, Aditya Birla Group, Mahindra & Mahindra, M&S, E&Y, Sony Pictures, and Adani Group, helping them save countless hours through the magic of AI (and occasionally coffee).

I proudly run Skillopedia, a training company passionately dedicated to empowering individuals and organizations. One highlight I cherish is training over 38,000 teachers during COVID, equipping them with digital teaching skills. Alongside AI and Generative AI, my expertise includes digital marketing, where I've mentored budding startups under the Meta Startup umbrella at 91 Springboard.

When I'm not geeking out over the latest AI models or mentoring startups, I can be found educating bright minds at nine prestigious IIMs, conducting corporate workshops, or possibly explaining AI concepts to my two curious kids, Ruhaan and Rumi, who are convinced their dad talks to robots for a living.
