

2.2.3 Question Answering

Conversational AI tools like ChatGPT or Gemini can answer questions with decent accuracy. For instance, if you ask ChatGPT about the average height of a cheetah, it will promptly provide the correct information.

Prompt For Answering Question

Can you tell me what is the average height of a cheetah

ChatGPT's Answer

ChatGPT

The average height of a cheetah at the shoulder typically ranges between 30 to 34 inches (76 to 86 centimeters). However, it's important to note that this can vary slightly depending on factors such as age, gender, and individual differences among cheetahs.

ChatGPT and Gemini answer questions accurately

2.2.4 Language Translation

These tools are very good at translating text into many languages. Let's consider easily translating a paragraph about how generative AI helps in marketing into French, Hindi, or any widely used language. This makes it easier for companies to penetrate different geographies and market their products and services in languages known to localities.

Prompt for Translation

Translate this in Hindi

“Generative AI can produce various types of content such as text, images, and videos. For marketing, this means that social media posts, blog articles, product descriptions, and even advertisements can be generated automatically.”
