

This was a very plain, generic, and not-so-great response. Now, try to change this. Open a new chat window on ChatGPT. This time, use **contextual prompting** by simply saying

Contextual Prompting

Write me a social media post for an organic lipstick brand. My target audience is females between the age group of 25 to 35 years. They want to be stylish at the same time, not harm any animals or their skin. They wish to have a chemical-free experience that will have adverse reactions. The lipstick comes in 20 plus shades, perfect for every occasion and is made with nature's love. The post is for Instagram, and it should be engaging. The aim is to get this content shared by as many people as possible. Do not give me regular social media posts, which many brands usually write in the same category.
