

EXERCISE

Task:

Experiment with Different Prompting Techniques

Below is a scenario. Try writing a **zero-shot**, **contextual**, and **act-as prompt** for each.

Scenario 1: Job Posting for a Software Engineer

Imagine you are an HR manager looking to hire a **software engineer** for your company. You need a **job description** for a LinkedIn post

- **Zero-shot Prompt:** Use your prompting **skills** and generate a **basic** job description without providing much context.
- **Contextual Prompt:** Add specific details like required **skills**, **experience level**, **company culture**, and **job benefits** to improve the response.
- **Act-as Prompt:** On ChatGPT or any other LLM of your choice instruct it to **act as an experienced HR professional** who writes engaging job postings that attract top talent.

Reflection

Compare the three responses. Which one was the most effective? Why?
