

You can see in the above screenshot that ChatGPT chose a word with a probability lower than its alternative. This is because it reasoned that ‘advers’ made more contextual sense than ‘artificial.’ ChatGPT does not just pick up the highest probability word every single time. Sometimes, context is also a factor in choosing a word.

4.2.2 Chat

In the Chat version, there are three modes. First is the system mode, where you can act as the backend of ChatGPT and choose whatever mode you want. For now, you will say:

“You are a helpful assistant who excels in office tasks and productivity management.” This is the role or mode you want ChatGPT to take. Now, you can also input what the user says. For now, you will input:

The screenshot shows the ChatGPT Playground interface. At the top right, there is a button labeled "Input query". Below it, a user profile icon is shown next to the text "How to increase Office Efficiency." The main interface is divided into three sections: "SYSTEM", "USER", and "CHAT". The "SYSTEM" section contains the text: "You are a helpful assistant excel in office tasks and productivity management". The "USER" section contains the text: "How to increase efficiency in office". The "CHAT" section is empty. On the right side, there are various settings: "Maximum length" (256), "Stop sequences" (Enter sequence and press Tab), "Top P" (0.5), "Frequency penalty" (0), and "Presence penalty" (0). At the bottom left, there is a "Submit" button. Annotations include: "Assigned role" pointing to the "SYSTEM" text, "System mode" pointing to the "SYSTEM" section, and "'Submit' button." pointing to the "Submit" button.

Act as the backend of ChatGPT and assume an assigned role
