

Since you had uploaded two files, the model got confused. So, you will remove the previous file. You will also turn the 'retrieval' parameter off and on once and choose the 'GPT-4-turbo' model. You will also press the broom icon to clear the responses.

Then, you will ask the query again. Then, you got the following response:

This response was generated from the uploaded file

Every part of this response was generated using the file you uploaded. You found the pages from which the content was taken in the file. You could verify that the chatbot got everything perfectly right.

Content accurately pulled from the pages of the uploaded file
