

[illegible]

Continue the process for a while. We go from 40 tosses for \$1 each to 4,000 tosses for 10 cents, to 400,000 tosses for 1 cent, getting close and closer to a Gaussian. [Figure 10](#) shows results spread between -40 and 40 , namely eighty plot points. The next one would bring that up to 8,000 points.

A hand-drawn bell curve, representing a normal distribution, is centered on a horizontal axis. The curve is smooth and symmetrical, tapering off towards the left and right edges of the frame.
