

**Plato's dogma on body symmetry:** "Athenian Stranger to Cleinias: In that the right and left hand are supposed to be by nature differently suited for our various uses of them; whereas no difference is found in the use of the feet and the lower limbs; but in the use of the hands we are, as it were, maimed by the folly of nurses and mothers; for although our several limbs are by nature balanced, we create a difference in them by bad habit," in Plato's *Laws*. See McManus (2002).

**Drug companies:** Other such firms, I was told, are run by commercial persons who tell researchers where they find a "market need" and ask them to "invent" drugs and cures accordingly—which accords with the methods of the dangerously misleading Wall Street security analysts. They formulate projections as if they know what they are going to find.

**Models of the returns on innovations:** Sornette and Zajdenweber (1999) and Silverberg and Verspagen (2005).

**Evolution on a short leash:** Dennet (2003) and Stanovich and West (2000).

**Montaigne:** We don't get much from the biographies of a personal essayist; some information in Frame (1965) and Zweig (1960).

**Projectibility and the grue paradox:** See Goodman (1955). See also an application (or perhaps misapplication) in King and Zheng (2005).

**Constructionism:** See Berger and Luckmann (1966) and Hacking (1999).

**Certification vs, true skills or knowledge:** See Donhardt (2004). There is also a franchise protection. Mathematics may not be so necessary a tool for economics, except to protect the franchise of those economists who know math. In my father's days, the selection process for the mandarins was made using their abilities in Latin (or Greek). So the class of students groomed for the top was grounded in the classics and knew some interesting subjects. They were also trained in Cicero's highly probabilistic view of things—and selected on erudition, which carries small side effects. If anything it allows you to handle fuzzy matters. My generation was selected according to mathematical skills. You made it based on an engineering mentality; this produced mandarins with mathematical, highly structured, logical minds, and, accordingly, they will select their peers based on such criteria. So the papers in economics and social science gravitated toward the highly mathematical and protected their franchise by putting high mathematical barriers to entry. You could also smoke the general public who is unable to put a check on
