

	PAW N=205	UAW N=215
Per Month	8.4	4.6
Per Year	100.8	55.2
Demographic Characteristics		
Age (Average Years)	54.4	56.0
Annual Realized Household Income (Average/\$000's)	51.5	48.9
Net Worth (Average/\$000's)	629.4	105.7
Net Worth of \$1 Million or More (%)	59.6	0.0
Expected Net Worth ¹ (Average/\$000's)	280.2	273.8
Realized Income As a Percent of Net Worth	8.2	46.3
Percent Self-Employed	59.1	24.7

¹ Expected net worth was computed via the wealth equation: expected net worth = $1/10 \text{ age} \times \text{annual realized household income}$.

We found that these middle-income PAWs spend an average of only 8.4 hours per month planning their investments. This translates to about 100.8 hours per year. Given that there are 8,760 hours in a year, PAWs allocate approximately 1.2 percent of their time planning their investments.

UAWs, on average, spend 4.6 hours per month planning their investments, or about 55.2 hours per year. In other words, PAWs spend an average of 83 percent more hours (100.8 versus 55.2) planning per month than do UAWs. UAWs allocate only 1 in 160 hours of their total available time to planning their investments. PAWs allocate 1 in 87 hours.

Will UAWs automatically become PAWS simply by doubling the number of hours they devote to planning their investments? Not likely. Planning is only one of many key ingredients in building wealth. Most PAWs have a regimented planning schedule. Each week, each month, each year, they plan their investments. They also start planning at a much earlier age than do UAWs.

UAWs, on the other hand, are much like some overweight people who occasionally starve themselves to reach their ideal weight. But more often than not, they regain all the weight they lost and more. UAWs may
