

HOURS SPENT IN AN AVERAGE MONTH FOR:	Dr. North	(PAW) N=155	Dr. South	(UAW) N=205
Studying/planning future investment decisions	10.0	(10.0)	3.0	(5.5)
Managing current investments	20.0	(8.1)	1.0	(4.2)
Exercising	30.0	(16.3)	10.0	(16.7)

Who spends more time managing his current investments? Again, the answer is predictable. Dr. North, on average, allocates about twenty hours a month, or 240 hours in a typical year, for this purpose, while his counterpart reported spending only one hour per month managing his current investments. Certainly, this is a contributing factor to Dr. South's low net worth.

Dr. North is a focused investor. He has two favorite investment categories, agricultural land and stocks from the medical industry:

First, a fellow I attended medical school with ... He saved the life of a patient who believed in investing in grade A agriculture/orchards. My colleague invested and told me about it. He told me that these people were very honest. I met them and agreed. I have been investing ever since ... still investing regularly today.

I have made most in the stock market from the medical industry.... Drug companies and medical instrument companies ... I know this area. I do research on the medical... drug field.... That's what Warren Buffett does ... invests in companies that he knows and understands. But you must have seed money [savings to invest] in areas you have knowledge. I have over \$2 million in my profit-sharing plan.

Dr. South is responsible for making the major investment decisions in his family. It was his decision to have accounts at four different full-service brokerage firms. But surprisingly, Dr. South has less than \$200,000 in securities. Then why does he have four different financial advisors? Because he believes, incorrectly, that he does not need to spend time making his own investment decisions. He admitted to us that he would be "really" affluent if he did not take advice from these so-
