

pound. The most popular model among millionaires is the Jeep Grand Cherokee, which sells for \$7.09 per pound.

How do these costs per pound compare with those of full-sized foreign cars? The BMW 740 sedan costs more than \$15.00 per pound; the Mercedes-Benz 500 SL is priced at more than \$22.00 per pound; and the Lexus LS400 is now selling for more than \$14.00 per pound. What about the Ferrari F40? It's \$175.00 per pound! (The estimated price per pound for most currently offered motor vehicles is provided in [Appendix 2](#) of this book.)

Many affluent respondents take joy in driving vehicles that do not denote so-called high status. They are more interested in objective measures of value. Some millionaires do spend considerable dollars for top-of-the-line luxury automobiles. But they are in the minority. For instance, approximately 70,000 Mercedes were sold in this country last year. This translates into about one-half of 1 percent of the more than fourteen million motor vehicles sold. At the same time, there were nearly 3.5 million millionaire households. What does this tell us? It suggests that the members of most wealthy households don't drive luxury imports. The fact is that two out of three purchasers or leasers of foreign luxury motor vehicles in this country are not millionaires.

Domestic brands have long been in favor with older millionaires. We believe this attitude is becoming more common even among younger millionaires. Why? Because the real growth in the millionaire market continues to come from the entrepreneurial segment. Entrepreneurs, as a rule, are more price-sensitive than others when it comes to acquiring motor vehicles. Successful entrepreneurs judge each expenditure in terms of productivity. They often ask themselves the impact heavy spending for motor vehicles will have upon their business's bottom line and ultimately their wealth. More often than not, they determine that investments for such items as advertising and new equipment are much more productive than very expensive motor vehicles.
